

Client Management App

1. Functional Requirement

Client and Admin can't connect each other. Client and Admin can communicate through HTTP Server. ***We couldn't use web socket.***

- Connect to Admin
Admin should store the list of newly connecting client.
- Run Command
Admin select the client and type and command.
Then the command should be run on client's machine and admin receive the command result.

Ex: [clientid] tasklist
- Up/Down File
Admin can upload file to client and download file from client.

2. Non-Functional Requirement

- Admin & Client has no GUI – we don't need any gui, just console application is enough.
- You can use any language for admin and client (c++, python, go, java...)
- For http server you should use php (https).
- Admin is windows and Client should be support multiplatform (mac, windows, linux)
- Executable of Admin and client should be less than 3Mb.
